Dear Ms. Henney,

I feel that irradiated foods need to have an obvious label that is easy to read on the front of the package indicating that they have been irradiated. This is a matter of consumer choice.

I also support the petition filed by CSPI regarding use of antibiotics in animal feed. Routine use of antibiotics removes the incentive to raise animals under humane conditions where disease is less prevalent. In addition, it makes these antibiotics less effective in treating humans.

Please take my opinions into account.

Thank you.

Sincerely,  
Lynn Markham
